EDUCATION

PES University

B.Tech in Computer Science

- Cumulative GPA: 8.32
- Recognitions: MDR scholarship (2x), Distinction award (2x)

Bengaluru, India

August 2018 - August 2022

WORK EXPERIENCE

Societe Generale

Software Engineer

Bengaluru, India

July 2022 – Present

- Contributed to migration of legacy banking applications to AWS, working on 5+ Spring Boot microservices and reducing deployment time by 20%.
- Developed and maintained React components for customer-facing applications serving 1000+ daily users, improving UI responsiveness by 25%.
- Implemented RESTful APIs following best practices, achieving 15% reduction in API response times through query optimization
- Designed PostgreSQL database tables and wrote optimized queries for transaction processing, handling 50K+ daily transactions
- Worked with Databricks environment for data processing tasks, writing SQL queries and understanding workflow orchestration for analytics pipelines.
- Utilized Jenkins CI/CD pipelines for application builds and deployments, troubleshooting build failures and maintaining deployment documentation.
- Deployed containerized applications on AWS ECS, creating and updating task definitions, configuring environment variables, and debugging issues using CloudWatch logs.
- Gained hands-on experience with AWS services including ECS, RDS, and Secrets Manager, managing application configurations and troubleshooting deployment issues.
- Actively participated in Agile ceremonies with distributed teams (France and India), maintaining 90% sprint commitment completion.
- Performed code reviews and collaborated with a team of 8 developers, following SOLID principles and maintaining code coverage above 70%.
- Implemented comprehensive logging across microservices, reducing debugging time by 30% for production issues.
- Applied common design patterns (Factory, Singleton) in Java services, improving code maintainability and reducing technical debt.

PWC (PriceWaterhouseCoopers)

Software Engineer Intern

Bengaluru, India

January 2022 – June 2022

- Developed Python desktop application using Tkinter framework for internal team use, implementing MVC pattern and reducing manual data entry time by 15%.
- Designed database schema and implemented SQLAlchemy ORM for MySQL integration, ensuring data consistency and improving query response time by 20%.
- Successfully deployed applications on Windows Server using IIS and Apache configuration, working closely with the IT team to resolve compatibility issues.
- Contributed to 2 proof-of-concept projects, gathering requirements and demonstrating technical solutions to stakeholders.
- Gained hands-on experience with full-stack development lifecycle, from requirements gathering to production deployment.

PUBLICATIONS

PROJECTS

Akkountant: Personal accounting web application

December 2022 – Present

- Developed a financial management application utilising Flask for backend and React for frontend, enhancing user experience and functionality.
- Implemented a transaction module leveraging Google API to access and parse transactional emails from user's Gmail accounts, extracting credit/debit details and storing them in a MySQL database.
- Automated the parsing of bank statements from 4 different banks, enabling direct user uploads and saving the statements to Google Drive for easy access.
- Built an investment module to track and manage various assets, including stocks, mutual funds, gold, NPS, EPF, PPF and fixed deposits, with integrated real-time updates using public APIs and web scraping as a fallback.
- Managed authentication using Firebase and custom implementations, utilizing Git for version control, containerizing the application with Docker and deploying on AWS ECS for scalability.
- Developed multiple versions improving speed by 3x, uptime of more than 98% and a better UI.

Tech stack: Flask, ECS, Docker, React, Web parsing, OOPS, Load balancing, RDS, Design patterns

Portfolio web application

February 2025 – March 2025

- Developed Designed and developed a personal portfolio website with light and dark mode toggle for enhanced user experience.
- Showcased key sections: Home, Career, Projects, providing a structured and engaging layout.
- Integrated a direct resume download feature, allowing visitors to easily access and save my resume.
- Implemented advanced transitions and animations for smooth navigation and a modern aesthetic.
- Deployed the portfolio on a custom domain, ensuring a professional online presence.

Tech Stack: React, TypeScript, Linux, Nginx.

Trip split: Expense splitting and sharing web application

September 2024 – January 2025

- Developed a web application that allows users to split and share expenses efficiently across multiple participants, simplifying group payments.
- Implemented multi-currency support with automatic currency conversions, enabling users to manage expenses in different currencies seamlessly.
- Designed user-friendly features for tracking, categorising, and managing group expenses in real time, improving transparency and financial management for users.

Tech Stack: Python, Flask, React, Typescript, Linux, Nginx

TECHNICAL SKILLS

Frameworks: Flask, Spring, Springboot, ReactJS

AWS: ECS, ECR, RDS, EC2

Languages: Python, Java, HTML, CSS, Javascript, Typescript, C++, C

Java techniques: JDBC, junit, Threading, Spring MVC

Database: MySQL, Postgres, Databricks

Tools: Git, Jira, Postman

Techniques: Responsive design, SSR, RESTful APIs, Agile/Scrum, OOPs, Data structures & Algorithms, Distributed Systems

LANGUAGES

English (Full working and professional proficiency)

Hindi (Full working and professional proficiency)
